Description

Twitter is a free social media platform that allows users to send and read short messages (up to 280 characters) called "tweets." Registered users can post, like and repost a tweet posted by another person (retweet), and unregistered users can only read those that are publicly available.

In order to benefit from all the features listed below, the user must create an account and use the application as an authenticated user.

1. Authentication
2. Create and manage posts
3. Comments
4. Socializing through short messages with other users
5. Search and filter posts
6. Upload video and photo content
7. Notifications

[SFT-2] Create user account

Description

If you want to receive the latest updates on any topic, you need to create an account on Twitter. For this, you only need an email address or phone number.

- Test User Registration Feature: **-** Verifying that users can successfully create new accounts using valid email addresses or phone numbers and passwords compliant with security requirements.
- Test User Authentication: **-** Confirmation that registered users can access accounts using the correct email addresses and passwords.

Description

Twitter has effective search features to help users find anything on the platform. Although tweepers post numerous media content, you can find any video with the help of a video search on **Twitter**. It doesn't matter how long ago a user posted a video, you can find it on the platform, provided it is still live. You just need to remember a few details about the video.
